STANFORD UNIVERSITY  
ACADEMIC SURGICAL/UROPATHOLOGIST  

The Department of Pathology at Stanford University School of Medicine seeks an academic pathologist with an interest in the pathology of the urogenital system for appointment as Assistant, Associate or Full Professor in the Medical Center Professoriate. The major criteria for appointment for faculty in the Medical Center Line shall be excellence in the overall mix of clinical care, clinical teaching, and scholarly activity that advances clinical medicine, and institutional service -- appropriate to the programmatic need the individual is expected to fulfill.

The Department handles approximately 47,000 tissue and 17,000 cytology specimens annually, and Stanford University Medical Center anticipates substantial increases in the numbers of prostate biopsies, prostatectomies and other procedures for cancer of the urogenital system.

In addition to assuming major responsibility for pathology of the urogenital system, and for the education of residents, clinical fellows and medical students in this field of pathology, the successful candidate will be expected to establish a research program in urologic pathology and/or related fields. There are abundant opportunities for research at Stanford University, both within the Department and in conjunction with other departments at the University, and this position will have protected time to engage in research, as well as departmental support for research projects.

Candidates must be board certified in Anatomic Pathology and are required to hold or to be eligible for a current license to practice medicine in the State of California. Fellowship training in Surgical Pathology or equivalent experience and subspecialty interest in urologic pathology are required, as is a record of scholarly contributions in clinical, translational or basic research. Sign-out responsibilities in anatomic pathology will include general surgical pathology, and frozen section analysis, as well as urologic pathology.
